

C Programming Cheat Sheet

C is a straightforward compiled programming language. Other programming languages borrow concepts from C, which makes C a great starting point if you want to learn programming languages such as Lua, C++, Java, or Go.

Basics	Variables								
<p>Include header files first, then define your global variables, then write your program.</p> <pre>/* comment to describe the program */ #include <stdio.h> /* definitions */ int main(int argc, char **argv) { /* variable declarations */ /* program statements */ }</pre>	<p>Variable names can contain uppercase or lowercase letters (A to Z, or a to z), or numbers (0 to 9), or an underscore (_). Cannot start with a number.</p> <table><tr><td>int</td><td>Integer values (-1, 0, 1, 2, ...)</td></tr><tr><td>char</td><td>Character values, such as letters</td></tr><tr><td>float</td><td>Floating point numbers (0.0, 1.1, 4.5, or 3.141)</td></tr><tr><td>double</td><td>Double precision numbers, like float but bigger</td></tr></table>	int	Integer values (-1, 0, 1, 2, ...)	char	Character values, such as letters	float	Floating point numbers (0.0, 1.1, 4.5, or 3.141)	double	Double precision numbers, like float but bigger
int	Integer values (-1, 0, 1, 2, ...)								
char	Character values, such as letters								
float	Floating point numbers (0.0, 1.1, 4.5, or 3.141)								
double	Double precision numbers, like float but bigger								
Functions									
<p>Indicate the function type and name followed by variables inside parentheses. Put your function statements inside curly braces.</p> <pre>int celsius(int fahr) { int cel; cel = (fahr - 32) * 5 / 9; return cel; }</pre>	<p>Allocate memory with malloc. Resize with realloc. Use free to release.</p> <pre>int *array; int *newarray; arr = (int *) malloc(sizeof(int) * 10); if (arr == NULL) { /* fail */ } newarray = (int *) realloc(array, sizeof(int) * 20); if (newarray == NULL) { /* fail */ }</pre>								

C Programming Cheat Sheet

```
}  
arr = newarray;  
  
free(arr);
```

Binary operators		Assignment shortcuts		
a & b	Bitwise AND (1 if both bits are 1)	a += b;	Addition	a = a + b;
a b	Bitwise OR (1 if either bits are 1)	a -= b;	Subtraction	a = a - b;
a ^ b	Bitwise XOR (1 if bits differ)	a *= b;	Multiplication	a = a * b;
a<<n	Shift bits to the left	a /= b;	Division	a = a / b;
a>>n	Shift bits to the right	a %= b;	Modulo	a = a % b;

Useful functions <stdio.h>		Useful functions <stdlib.h>
stdin	Standard input (from user or another program)	int putchar(int ch);
stdout	Standard output (print)	
stderr	Dedicated error output	

```
FILE *fopen(char *filename, char *mode);  
  
size_t fread(void *ptr, size_t size,  
size_t nitems, FILE *stream);  
int fclose(FILE *stream);  
  
int puts(char *string);  
int printf(char *format, ...);  
int fprintf(FILE *stream, char *format);  
int sprintf(char *string, char *format);  
  
int getc(FILE *stream);  
int putc(int ch, FILE *stream);  
  
int getchar();
```

C Programming Cheat Sheet

```
void *malloc(size_t size);  
void *realloc(void *ptr, size_t newsize);  
  
void free(void *ptr);  
  
void qsort(void *array, size_t nitems,  
size_t size, int (*compar)(void *a, void  
*b));  
  
void *bsearch(void *key, void *array,  
size_t nitems, size_t size, int (*compar)  
(void *a, void *b));  
  
void srand(unsigned int seed);  
  
void rand();
```

Always test for **NULL** when allocating memory with **malloc** or **realloc**.

If you **malloc** or **realloc**, you should also **free**. But only free memory once.
